ffmpeg

THE PROBLEM

Demo videos are painful to produce

2-4 hrs

Average time to produce
a 3-min demo video

3-5x

Re-recordings needed
per final version

\$500+

Cost of professional
voiceover per video

0 min

Time left for demos
at hackathon deadlines

Manual screen recording (OBS, Loom) with constant retakes

Timeline editing software just for a simple walkthrough

Robotic TTS or expensive voiceover artists

Videos go stale with every UI update — re-record everything

OUR APPROACH

5-step autonomous pipeline

Total time: ~60 seconds | Deterministic: same script = same video | CI/CD ready

THE SOLUTION

Intelligent features, not just automation

AI Script Generation

Gemini sees your screenshot + page structure (nav, buttons, forms) and writes a demo script with real CSS selectors and natural narration

Voice-to-Script

Speak your demo intent into the mic. Speechmatics transcribes, Gemini converts to a structured script with actions

Natural Demo Feel

Gold highlight glows on clicks, smooth quadratic scrolling, character-by-character typing, 200ms slowMo between actions

AI Video QA

Gemini vision reviews 6 frames from the final video, scoring quality 1-10 and flagging issues automatically

Cookie Consent Handling

80+ CMP selectors auto-dismiss consent banners (OneTrust, Ketch, Cookiebot, etc.) before recording starts

Full Manual Override

Edit every segment, narration line, and browser action before rendering. You control the final output

TECHNOLOGY

Built with hackathon partner technologies

AI Intelligence

Google Gemini 2.5 Flash

Script generation from screenshots,
page structure analysis, video QA review

Infrastructure

Vultr Cloud

Headless Chromium + ffmpeg deployment,
scalable VM infrastructure

Voice Processing

Speechmatics

Voice-to-text transcription,
word-level timestamps + confidence

Recording

Playwright

Browser automation + recordVideo API,
Chromium at exact viewport size

Narration

edge-tts

Microsoft Azure Neural voices,
10+ voices, free, no API key

Composition

ffmpeg

Video composition, H.264 encoding,
audio sync + concat demuxer

Also: React 19 + Vite (frontend) | Express.js + TypeScript (backend) | WebRTC MediaRecorder (mic input)

Why DemoPilot for AI Agent Olympics

Track: Agentic Workflows

DemoPilot is an autonomous AI agent with a multi-step pipeline: analyze → script → record → narrate → compose → QA. Each step uses AI decision-making — Gemini chooses which elements to click, what to narrate, how to pace the demo. No human in the loop.

Track: Enterprise Utility

Every SaaS company needs demo videos. DemoPilot replaces a \$500+ manual process with a 60-second autonomous pipeline. Deterministic output means it integrates into CI/CD — auto-generate updated demos on every product release.

Proof: Both showcase videos (AgentShield & Meridian) were generated entirely by DemoPilot — URL to MP4, zero human editing

PROOF OF CONCEPT

Generated demos — no human hands

HACKATHON ENTRY

[VIDEO]

AgentShield Demo

5:15 min | AI security dashboard

Full walkthrough: Dashboard → Scan → Red Team

COMPETITION ENTRY

[VIDEO]

Meridian Demo

3:33 min | LC intelligence platform

Workflow & analytics walkthrough

Both videos visible on demopilot.app landing page with embedded players

DEMOPILOT

URL in. Demo video out.

~60 seconds | Zero human editing | 10+ neural voices | CI/CD ready
