THE PROBLEM

Demo videos are painful to produce

2-4 hrs

Average time to produce
a 3-min demo video

3-5x

Re-recordings per
final version

\$500+

Cost of professional
voiceover per video

0 min

Time left at
hackathon deadlines

Manual screen recording (OBS, Loom) with constant retakes

Timeline editing software just for a simple walkthrough

Robotic TTS or expensive voiceover artists

Videos go stale with every UI update — re-record everything

OUR APPROACH

5-step autonomous pipeline

Total time: ~60 seconds | Deterministic: same script = same video | CI/CD ready

THE SOLUTION

Intelligent features, not just automation

AI Script Generation

Gemini sees your screenshot + page structure and writes a demo script with real CSS selectors and natural narration

Voice-to-Script

Speak your demo intent into the mic. Speechmatics transcribes, Gemini converts to a structured script with actions

Natural Demo Feel

Gold highlight glows on clicks, smooth quadratic scrolling, character-by-character typing, 200ms slowMo

AI Video QA

Gemini vision reviews 6 frames from the final video, scoring quality 1-10 and flagging issues automatically

Cookie Consent Handling

80+ CMP selectors auto-dismiss consent banners (OneTrust, Ketch, Cookiebot, etc.) before recording

Full Manual Override

Edit every segment, narration line, and browser action before rendering. You control the final output

 DemoPilot

AI AGENT OLYMPICS 2024

Launch App

AUTONOMOUS DEMO AGENT

URL in.
Demo video out.

Paste any web app URL. Our AI agent captures a screenshot, writes a narrated script, drives the browser, generates voiceover, and delivers a production-ready MP4. No recording. No editing. No retakes.

DEMOPILOT — SYSTEM ARCHITECTURE

Before vs After DemoPilot

BEFORE — Manual Process

2-4 hours	per 3-minute demo video
5+ tools	OBS + editor + TTS + script + review
3-5 retakes	per final version due to mistakes
\$500+	professional voiceover per video
Stale on update	UI changes = re-record everything
No CI/CD	manual process, can't automate
Inconsistent	different quality each recording

AFTER — DemoPilot

~60 seconds	fully autonomous, end-to-end
1 tool	paste URL, click generate
0 retakes	deterministic — same script, same video
\$0	edge-tts neural voices, free
Auto-update	re-run script, instant refresh
CI/CD ready	same script = same video output
Consistent	production quality every time

240x faster | 100% autonomous | \$0 per video | Deterministic output

TECHNOLOGY

Built with hackathon partner technologies

AI Intelligence

Google Gemini 2.5 Flash

Script generation, screenshot analysis,
video QA review

Infrastructure

Vultr Cloud

Headless Chromium + ffmpeg,
scalable VM infrastructure

Voice Processing

Speechmatics

Voice-to-text transcription,
word timestamps + confidence

Recording

Playwright

Browser automation + recordVideo,
Chromium at exact viewport

Narration

edge-tts

Microsoft Azure Neural voices,
10+ voices, free, no API key

Composition

ffmpeg

Video composition, H.264,
audio sync + concat demuxer

Also: React 19 + Vite (frontend) | Express.js + TypeScript (backend) | WebRTC MediaRecorder (mic input)

Why DemoPilot for AI Agent Olympics

Track: Agentic Workflows

DemoPilot is an autonomous AI agent with a multi-step pipeline: analyze → script → record → narrate → compose → QA. Each step uses AI decision-making — Gemini chooses which elements to click, what to narrate, how to pace. No human in the loop.

Track: Enterprise Utility

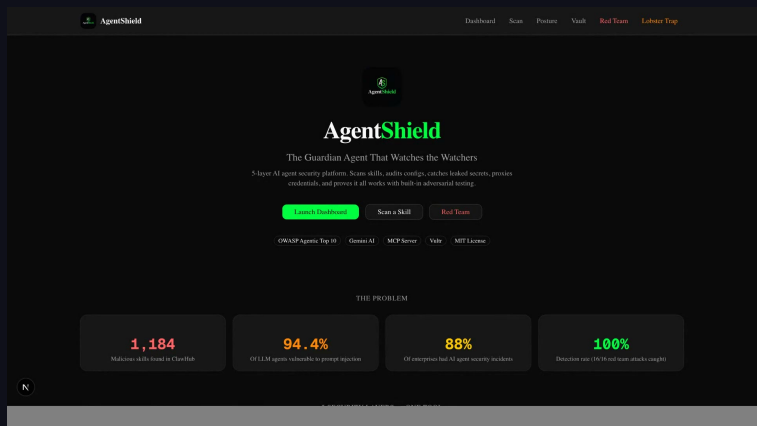

Every SaaS company needs demo videos. DemoPilot replaces a \$500+ manual process with a 60-second autonomous pipeline. Deterministic output integrates into CI/CD — auto-generate updated demos on every product release.

Proof: Both showcase videos were generated entirely by DemoPilot — URL to MP4, zero human editing

PROOF OF CONCEPT

Generated demos — no human hands

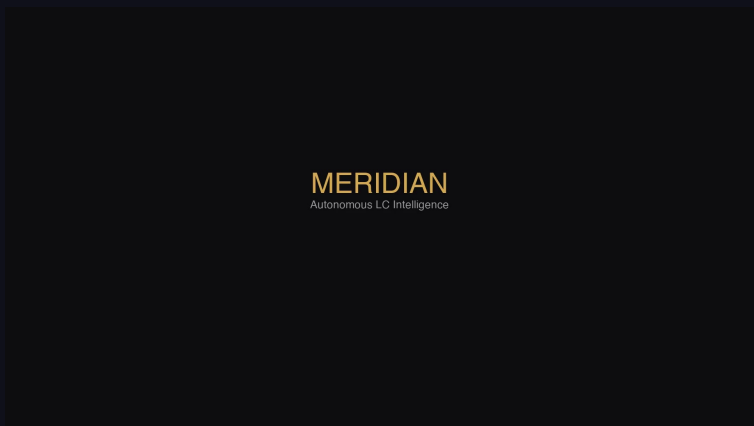

HACKATHON ENTRY
